Figure 10 consists of two graphs, A and B, showing the evolution of the maximum temperature T_{max} (°C) as a function of time (s). Both graphs have a y-axis from 0 to 24 and an x-axis from 0 to 55.

Graph A shows T_{max} for different heat fluxes: 1000 W/m² (red), 800 W/m² (dark grey), 600 W/m² (light grey), 400 W/m² (orange), and 200 W/m² (yellow). The curves show a plateau followed by a sharp drop to 0°C. The plateau height increases with heat flux, and the drop occurs later for higher heat fluxes.

Graph B shows T_{max} for different temperatures: 5°C (red), 25°C (dark grey), 45°C (light grey), and 65°C (orange). The curves show a plateau followed by a sharp drop to 0°C. The plateau height increases with temperature, and the drop occurs later for higher temperatures.
